COURSE DESCRIPTION: This intensive one-day course focuses on six chronic diseases common to older patients. Evidence-based care management modalities tailored to care of complex older patients are presented.

The course is designed to address the unmet educational needs of primary care physicians who have a diverse case mix that includes older adults. Local and invited physician faculty have national recognition for their expertise in chronic disease management.

This is a fast-paced course with most speakers using an audience response system both before and after each presentation which provides participants with immediate feedback of their knowledge and the opportunity to reinforce comprehension and retention of key learning objectives. Each session will include time for questions and answers. The course combines best practice strategies and education through case studies and lectures. A full syllabus of educational materials will be provided as a resource for today’s primary care practice office. An on-demand video library of the presentations will be available to presenters as a future reference.

COURSE OBJECTIVES: Upon completion of the seminar, participants should be able to improve patient outcomes by being able to:

- Recognize underlying illness in older patients with atypical presentation;
- Assess commonly over-looked diagnostic evidence specific to older patients with chronic disease;
- Formulate patient centered chronic disease care plans;
- Defend the rationale for selection of care management modalities in older patients.
