COURSE DESCRIPTION AND PURPOSE:
This one-and-a-half-day conference focuses on the pediatric population and is designed to provide physicians and primary care givers with an approach to working with and managing patients with gastrointestinal complaints. Gastrointestinal symptoms are one of the most common complaints of parents and children seeking medical care. These symptoms are often vague and non-specific and the practitioner must differentiate between common and uncommon disorders and diseases. This is a fast-paced course, with most speakers using an audience-response system during the presentations, which provide participants with immediate feedback of their knowledge and the opportunity to reinforce comprehension and retention of key learning objectives. The course combines best-practice strategies and education through case studies, panel discussion and lectures. A full syllabus of educational materials and diagnostic and treatment algorithms will be provided as a resource for today’s primary care office practice.

GENERAL OBJECTIVES
Upon completion of the conference, participants should be able to improve physician and primary care practitioner competence, performance and patient outcomes by being able to:

1. Differentiate symptoms of dysphagia and reflux from GERD and eosinophilic esophagitis
2. Recognize the key symptoms differentiating constipation from dysmotility or mechanical obstruction
3. Describe problems with health care adherence and compliance with medical recommendations
4. Explain how exploring the intestinal microbiome may provide insight into gastrointestinal disease
5. Compare evaluation and treatment response to various symptoms of diarrhea
