Cardiac Screening and Prevention: The Primary Care/ Specialty Partnership

COURSE DESCRIPTION AND PURPOSE:
This one-and-a-half-day conference focuses on the pediatric population and is designed to provide physicians and primary care givers with an approach to working with and managing pediatric cardiology patients. The course goal is to provide physicians and primary care givers with the current patient recommendations, screening tests and practice guidelines needed for pediatric preventive cardiology assessment for all children and adolescents and provide care for the pediatric cardiology patient. This is a fast-paced course, with most speakers using an audience-response system during the presentations, which provide participants with immediate feedback of their knowledge and the opportunity to reinforce comprehension and retention of key learning objectives. The course combines best-practice strategies and education through case studies, panel discussion and lectures. A full syllabus of educational materials will be provided as a resource for today’s primary care office practice.

GENERAL OBJECTIVES
Upon completion of the conference, participants should be able to improve physician and primary care practitioner competence, performance and patient outcomes by being able to:

1. Recognize the multiple factors to assess when considering a child’s cardiovascular risk factor
2. Explain screening procedures such as EKGs and ECHO
3. Describe current cardiovascular interventional procedures
4. Describe the current recommended screening exam for the pediatric athlete
5. Describe current patient recommendations, screening tests and practice guidelines needed for a routine pediatric preventive cardiology assessment for all children and adolescents
